Almond Shell Granule

A light abrasive granule — available in multiple calibres for cosmetic and delicate-cleaning applications.

Ground from almond shell and available in different calibres, this granule stands out in delicate-surface and cosmetic applications for its light, gentle abrasiveness. It is supplied regularly from almond production in the Aegean region. Being lower in hardness than other shell granules (walnut, hazelnut, peach kernel), it is preferred in jobs that carry no scratch risk. With its natural, biodegradable structure it is among the microplastic alternatives. For cosmetic applications, batches with a raised cleaning standard are available;
